ARTICLE 2.3 - Construction Permits and Certificates

ARTICLE 2.3.1 - Calculation of Cost Estimate for the Proposed Work

The costs set out in the present article, as well as the associated tariffs and deposits, must be paid before the permit is issued.

To determine the cost of the permit for the construction of a new building to be established either in a zone of residential, commercial, and service, industrial, institutional, or public dominance or, for the renovation of an existing building, the cost of the proposed work will have to be determined first. The cost of the permit is calculated based on the cost of the proposed work.

The cost of the work is based on the greater of the estimate from the licensed contractor or the amount obtained from the following calculation:

- For a new construction:
\$200.00/ sq. ft. of the gross floor area
- For renovation of an existing home
\$50.00/ sq. ft. of the gross floor area

The volume of the building must include all the space enclosed by the building and the foundations as well as all the space enclosed under the roof. Information concerning the volume must be indicated on the permit application form.

The gross area of the building is the total of all the floor areas, calculated from the exterior limits of the building. The gross area, the description and the cost of the works must be indicated on the completed permit application form. The application must also be accompanied by an estimate and a detailed description of the work to be carried out signed by the contractor.
